

SUMMARY

Extensive knowledge as a Full Stack developer with experience taking a project from initial conception to launch. In 2015 I created a tech startup known as MechFinder, which became one of the final 3 candidates for a seed funding round from Desert Angels. While we didn't obtain the funding, I still loved experience. A family emergency did pull me away from web-dev for a couple of years, but I'm eager to get back into this space, and to continue growing my career as a software developer!

SKILLS

Languages

Python
JavaScript
SQL
HTML / CSS

Frameworks and Libr.

Flask
Node.js
React.js
Redux
Express

Testing

Jasmine
Jest

Tech

Git
Data Structures
Algorithms
Photoshop
APIs

Other

Sales
Management
Communication
Business Development

PROJECTS

MyVaccineExperience.org 2021

- Social media constantly validates the good or bad aspects of vaccines/COVID based on a user's original beliefs. So I developed an unbiased platform for users to share their experiences and to monitor the collective stats. Utilizes Express, React, PSQL, Jest, Formik, Fingerprints & Heroku.

Pretty Fast Books (Simplified QuickBooks) *Springboard Capstone Project* 2020

- Plaid API securely uploads user transactions, and Python, Flask, SQL, and Chart.js allow users to categorize transactions, create personalized budgets, and easily visualize spending habits.

MechFinder (see below) 2016-2017

EXPERIENCE

Solusion Inc.: Project Manager 2018 - Present

- Started as a regional solar sales manager and ended up developing a new commercial LED lighting division within the company; which I then ran.
- Entrusted by the largest auto dealerships in Southern California, such as Penske, Myers Auto Group, and Moss Bros to complete \$100,000+ lighting projects on time and on budget.
- To date, every dealership has given us additional work after the initial project!

Stelian Onufrei for Congress: Senior Data Analyst 2017 - 2018

- Assembled, documented, and managed internal data of the 550,000+ voters in our district. Automated email and mail campaigns, drafted canvassing maps, and oversaw internal polling.

Tesla Energy: Solar Sales Manager 2017 - 2018

- Handled the entire sales process from generating leads, to the final sale, to long-term retention.
- 12th in our 4-state region by month 2, and broke \$250,000 in sales by month 3.

MechFinder.com: Software Engineer / Tech Startup Cofounder 2016 - 2017

- One of the final 3 candidates for a seed funding round from Desert Angels.
- Managed a year-long project to create a comprehensive social platform that connects customers in need of car repair with local qualified mechanics.
- Led and guided the development team, established the business infrastructure, created the marketing and reputation management systems, negotiated strategic partnerships, and more.
- Built upon Node.js, Express, and MongoDB and deployed via Google Cloud.
- Handled secure user authentication and data storage and utilized linking socket connections for real-time notifications and chat services.

Project Million: Content Creator 2012 - 2016

- Developed health education workbooks that were used by 4th to 6th graders throughout Arizona.
- After one semester students reported that 28% stop drinking soda entirely, 63% had more confidence, 76% exercised more, and 37% said they also helped their family eat better!
- Fostered and forged partnerships with companies such as Sprouts, Whole Foods, Forks Over Knives, the Phoenix Suns, and more.

Top Shelf Events: Event Manager 2009 - 2012

- By the age of 20 I was managing multi-million events for celebrities and high net-worth individuals throughout New York City (inc. the Met Gala).

EDUCATION

Springboard Software Engineering Bootcamp Certification – 2021

- 800-hour intensive course in Software Engineering methodologies and technologies

Glendale Community College (3.95 GPA) Associates – 2012

- Honors and Phi Theta Kappa Graduate (Dedicated to top 5% of grads)
